Fuel Tank Repairs

BACKGROUND INFORMATION:

The underground gas tanks at the Public Works facility have spill containment baskets at the dispensers and the tank fill points. These baskets prevent fuel from seeping into the ground should a leak occur. Starting in October 2020, the State will be inspecting tanks for leaks and cracks on a three-year cycle. If a fuel system is found to be non-compliant, fines and immediate corrections to the system are required. In preparation for the State's inspection, our system was checked independently and found to have cracks in the baskets and pipe boots.

Quotes have been obtained from Zahl Petroleum Maintenance Company and O'Day Equipment LLC to make the fuel tank repairs prior to the State's inspection.

FISCAL IMPACT:

O'Day Equipment LLC provided a lower quote in the amount of \$19,126.36. Funding for this unanticipated work will come from the sale of two Public Works trade-in vehicles scheduled for this fall.

STAFF RECOMMENDATION:

Staff recommends that City Council award a contract to O'Day Equipment, LLC in the amount of \$19,126.36 to make repairs to the City's fuel tank system.
